## **Remarks**

## I. <u>Introduction</u>

Claim 1 is pending in the present application. In view of the foregoing amendment, it is respectfully submitted that the presently pending claim is allowable, and reconsideration is respectfully requested.

## II. Rejection of Claim 1 Under 35 U.S.C. §103(a)

Claim 1 rejected as being unpatentable under 35 U.S.C. §103(a) over U.S. Patent No 4,496,583 ("Yamamoto") in view of either U.S. Patent No. 5,232,595 ("Meyer") or U.S. Patent No. 4,876,007 ("Narou") and U.S. Patent No. 2,862,542 ("Norton"), and further in view of U.S. Patent No. 4,772,443 ("Thornton et al."), U.S. Patent No. 5,492,580 and German Patent No. 4,024,053 A1 (collectively "Frank") and U.S. Patent No. 3,616,167 ("Gosden"). Applicant respectfully submits that the combination of Yamamoto, Meyer, Narou, Norton, Thornton et al., Frank and Gosden does not render obvious the present claims for the following reasons.

Claim 1 relates to a method for manufacturing a pleated filter material from a thermally bonded non-woven fabric. Claim 1 recites that the method includes the step of forming a single fibrous web from undrawn and drawn synthetic fibers. In addition, claim 1 recites that the method includes the step of preheating the fibrous web. Claim 1 has been amended herein without prejudice to recite that the method includes the step of calendaring the single fibrous web with a cold calendar roll in a single calendering step without subsequent re-heating. Support for this amendment may be found, for example, at page 3, line 37 to page 4, line 1 of the Specification which states that "the calender rolls can be operated ... cold, in the case of a preheated fibrous web." Emphasis added. Furthermore, claim 1 recites that, during the single calendering step, the undrawn fibers in the single fibrous web are bonded in a tension-free manner between non-heated profiled calender rolls to form the non-woven fabric, without inhomogeneities over the cross-section of the non-woven fabric and without the use of flat bonding. In addition, claim 1 recites that, during the single calendering step, spacers are formed in the non-woven fabric to thereby form the filter material.

The Office Action states that the claims are rejected "for the reasons of record set forth in Examiner's Answer in Paper No. 24 ... and for reasons of record

set forth in Paper No. 38 numbered paragraph 2." Office Action at page 2. The Office Action also states that "[a]s for the added limitation ("without subsequent reheating"), the process taught by Yamamoto et al particularly the one illustrated examples 13-14 does not require any reheating after web sheets were calendered [and that] therefore, this added limitation fails to define over the art of record." Office Action at page 2. The Office Action also states that "[i]In response to Counsel's argument toward the bottom of page 5 regarding a newly added limitation of 'without subsequent re-heating', contrary to Counsel's characterization of the Yamamoto patent, this patent does not teach heating a calendered web in order to dry a fiber sheet." Office Action at page 3. The Office Action states that "[t]he passage cited by Counsel is directed to processes illustrated in examples 17-23 and not examples 13-14 [but that] examples 17-23 do not calendar a web sheet [and that is] precisely the reason why a web sheet which is formed by paper-making process is heated to dry the web sheet (col. 10 lines 21-32)." Office Action at page 3. The Office Action concludes that "in examples 13-14, a web sheet which is formed by paper-making process is subjected to a calendering operation without any subsequent heat-drying step." Office Action at page 3.

Applicant respectfully submits that the combination of Yamamoto, Narou, Norton, Thornton et al., Frank and Gosden does not render obvious claim 1 for at least the reason that the combination of Yamamoto, Narou, Norton, Thornton et al., Frank and Gosden fails to teach or suggest, either separately or in combination, all of the limitations recited in claim 1. For example, the combination of Yamamoto, Narou, Norton, Thornton et al., Frank and Gosden fails to teach or suggest, either separately or in combination, a method for manufacturing a pleated filter material that includes the step of calendering the single fibrous web with a cold calendar roll in a single calendering step without subsequent re-heating, as recited in amended claim 1. According to the present invention, the Specification states at page 3, line 37 to page 4, line 1 that "the calender rolls can be operated ... cold, in the case of a preheated fibrous web." Emphasis added. The Specification also states at page 2, lines 31 to 34 that "it is advantageous that the finished filter medium, after the spacers have been impressed in the only calendering process, does not have to be heated again." Emphasis added. The Specification further states at page 2, line 34 to page 5, line1, that "[r]etractive forces within the filter material which can lead to an unwanted deformation of the spacers are prevented

į.

NY01 647531 v 1 4

following the manufacture and during the entire service life of the filter insert.".

In contrast, for instance, Yamamoto describes one type of process in Examples 17 to 23, in which "a paper-like sheet was formed at a speed of 12 m/min, dried at a temperature of 120°C and, then, wound up." Column 10, lines 28 to 30 (emphasis added). Thus, in Examples 17 to 23, Yamamoto describes that, in the absence of a calendering process, heat is applied in order to dry the fiber sheet. The Examiner acknowledges that Examples 17 to 23 do not provide a calendering step. In addition, Yamamoto also describes another type of process in Examples 13 and 14, which the Examiner relies upon to demonstrate that a subsequent reheating step, e.g., a drying step, is not required in Yamamoto when a calender process is performed. However, Yamamoto states that "[t]he sheets produced in Examples 13 and 14 were pressed by using a calender roll ... at a temperature of 180°C in Example 13 and 130°C in Example 14." Column 8, lines 37 to 40, emphasis added. Thus, to the extent that Yamamoto describes that a subsequent re-heating step may be avoided, Yamamoto describes that such re-heating may only be avoided if the calender rolls that are employed are heated. This is in direct contravention with claim 1 as amended, which recites that, after pre-heating the fibrous web, the fibrous web is calendered with a cold calender roll in a single calendering step without subsequent re-heating.

In addition, Narou also describe that "the filtration membranes can be easily stuck to the filtration unit by .. a method using an adhesive agent cross-linked by heat, a heat-seal method or the like." Column 9, lines 16 to 21. The additional cited references are not relied upon to disclose, nor do they disclose, a method for manufacturing a pleated filter material that includes the step of calendering the single fibrous web with a cold calender roll in a single calendering step without subsequent re-heating, as recited in amended claim 1.

To establish <u>prima facie</u> obviousness, three criteria must be satisfied. First, there must be some suggestion or motivation to modify or combine reference teachings. <u>In re Fine</u>, 837 F.2d 1071, 5 U.S.P.Q.2d 1596 (Fed. Cir. 1988). This teaching or suggestion to make the claimed combination must be found in the prior art and not based on the application disclosure. <u>In re Vaeck</u>, 947 F.2d 488, 20 U.S.P.Q.2d 1438 (Fed. Cir. 1991). Second, there must be a reasonable expectation of success. <u>In re Merck & Co., Inc.</u>, 800 F.2d 1091, 231 U.S.P.Q. 375 (Fed. Cir. 1986). Third, the prior art reference(s) must teach or suggest all of the claim

NY01 647531 v 1 5

limitations. In re Royka, 490 F.2d 981, 180 U.S.P.Q. 580 (C.C.P.A. 1974). Since the combination of Yamamoto, Narou, Norton, Thornton et al., Frank and Gosden does not teach, or even suggest, all of the limitations of claim 1 as more fully set forth above, it is respectfully submitted that the combination of Yamamoto, Narou, Norton, Thornton et al., Frank and Gosden does not render obvious claim 1.

It is respectfully submitted that the cases of <u>In re Fine</u>, <u>supra</u>, and <u>In re Jones</u>, 21 U.S.P.Q.2d 1941 (Fed. Cir. 1992), make plain that the Office Action's generalized assertions that it would have been obvious to modify or combine the references do not properly support a § 103 rejection. It is respectfully submitted that those cases make plain that the Office Action reflects a subjective "obvious to try" standard, and therefore does not reflect the proper evidence to support an obviousness rejection based on the references relied upon. In particular, the Court in the case of <u>In re Fine</u> stated that:

The PTO has the burden under section 103 to establish a *prima* facie case of obviousness. It can satisfy this burden only by showing some objective teaching in the prior art or that knowledge generally available to one of ordinary skill in the art would lead that individual to combine the relevant teachings of the references. This it has not done. . . .

. . .

Instead, the Examiner relies on hindsight in reaching his obviousness determination. . . . One cannot use hindsight reconstruction to pick and choose among isolated disclosures in the prior art to deprecate the claimed invention.

<u>In re Fine</u>, 5 U.S.P.Q.2d at 1598 to 1600 (citations omitted; italics in original; emphasis added). Likewise, the Court in the case of In re Jones stated that:

Before the PTO may combine the disclosures of two or more prior art references in order to establish *prima facie* obviousness, there must be some suggestion for doing so, found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. . . .

Conspicuously missing from this record is any evidence, other than the PTO's speculation (if it be called evidence) that one of ordinary skill . . . would have been motivated to make the modifications . . . necessary to arrive at the claimed [invention].

In re Jones, 21 U.S.P.Q.2d at 1943 & 1944 (citations omitted; italics in original).

That is exactly the case here since it is believed and respectfully submitted that the present Office Action offers no evidence whatsoever, but only conclusory hindsight, reconstruction and speculation, which these cases have indicated does not constitute evidence that will support a proper obviousness finding. Unsupported assertions are not evidence as to why a person having ordinary skill in the art would be motivated to modify or combine references to provide the claimed subject matter of the claims to address the problems met thereby. Accordingly, the Office must provide proper evidence of a motivation for modifying or combining the references to provide the claimed subject matter.

More recently, the Federal Circuit in the case of <u>In re Kotzab</u> has made plain that even if a claim concerns a "technologically simple concept" -- which is not the case here -- there still must be some finding as to the "specific understanding or principle within the knowledge of a skilled artisan" that would motivate a person having <u>no</u> knowledge of the claimed subject matter to "make the combination in the manner claimed," stating that:

In this case, the Examiner and the Board fell into the hindsight trap. The idea of a single sensor controlling multiple valves, as opposed to multiple sensors controlling multiple valves, is a technologically simple concept. With this simple concept in mind, the Patent and Trademark Office found prior art statements that in the abstract appeared to suggest the claimed limitation. But, there was no finding as to the specific understanding or principle within the knowledge of a skilled artisan that would have motivated one with no knowledge of Kotzab's invention to make the combination in the manner claimed. In light of our holding of the absence of a motivation to combine the teachings in Evans, we conclude that the Board did not make out a proper prima facie case of obviousness in rejecting [the] claims . . . under 35 U.S.C. Section 103(a) over Evans.

In re Kotzab, 55 U.S.P.Q.2d 1313, 1318 (Fed. Cir. 2000) (emphasis added). Again, it is believed that there have been no such findings.

In summary, it is respectfully submitted that the combination of Yamamoto, Narou, Norton, Thornton et al., Frank and Gosden does not render obvious amended claim 1. It is therefore respectfully submitted that claim 1 is allowable for these reasons, and withdrawal of this rejection with respect to claim 1 is therefore respectfully requested.

NY01 647531 v 1 7

## III. Conclusion

It is therefore respectfully submitted that all of the presently pending claims are allowable. All issues raised by the Examiner having been addressed, an early and favorable action on the merits is earnestly solicited.

Respectfully submitted,
